Professional Summary

Backend Engineer with 2+ years of experience building scalable **Java Spring Boot microservices** for enterprise fintech application serving **3K+ users daily**. Specialized in designing and developing backend services using **Java, Spring Boot, REST APIs, SQL**, and distributed systems. Experienced in modernizing legacy applications, improving system performance, and delivering reliable, maintainable solutions in agile environments.

Work Experience

Wissen Technology Pvt Ltd, Bengaluru

June 2024 – Present

Associate Software Engineer

- Engineered an automated job distribution and candidate ingestion pipeline using **Spring Batch**, establishing a closed-loop hiring system that processes **800+ open positions** monthly.
- Optimized API response times using **Spring Data JPA (Hibernate)** query tuning and application-level **caching**, achieving a **70% reduction** in latency.
- Expanded test coverage and observability suites using **JUnit 5, Mockito, MockMvc, H2, Grafana, and Loki**, increasing **unit test coverage from 5% to 30%** and accelerating production incident resolution.
- Mitigated **OWASP Top 10** vulnerabilities by configuring **Spring Security** to enforce **CORS, CSRF** protection, and a strict **CSP**, reducing application security risk by **~40%**.
- Modernized a monolithic legacy application into microservices using **Java 17, Spring Boot 2.7 and Gradle 8**, upgrading from Java 8/Ant/Spring MVC while **improving dependency freshness from 2% to 25%**.
- Improved resiliency for real-time budget status sync using **Spring Retry**, **reducing failed re-stream incidents by ~80%** via automated retry logic for downstream systems.
- Improved system performance by decoupling dependent services using an asynchronous, + database-backed queue to replace synchronous REST calls, **reducing API execution time by ~60%**.
- Implemented asynchronous event messaging using **IBM MQ, streaming 2K+** daily budget status updates to downstream systems while improving reliability and reducing latency.

Technical Skills

- Languages: Java, J2EE, JavaScript, TypeScript, Shell
- Frameworks: Spring Boot, Spring Batch, Spring Security, Spring Data JPA, Angular, React.js
- Databases: RDBMS, SQL, IBM DB2, Snowflake, Sybase
- DevOps and Tools: CI/CD, Jenkins, Git, GitHub, Bitbucket, Grafana, Postman, Jira, Gradle, Maven

Projects

PrepPilot : *AI-Powered Interview Preparation Platform* | [GitHub](#) | [Live](#)

- Developed PrepPilot, an AI-powered interview preparation platform offering interactive study chats, custom practice quizzes, and real-time mock interview evaluations to help candidates practice technical topics effectively.
- Built microservices using **Java and Spring Boot** for user authentication and core business logic, along with a **Python (FastAPI)** service that integrates with LLMs for real-time streaming responses.
- Created a responsive single-page application using **React, TypeScript, Vite, and Redux Toolkit** for state management and **real-time Server-Sent Events(SSE) stream** handling.
- Containerized and deployed services using **Docker** Compose, routing external requests through a **Spring Cloud Gateway** with **JWT authentication** and **MongoDB** for data storage
- Deployed the independent services on **AWS EC2** instances, forming a Distributed system architecture

Talent-Lens : *Full-Stack AI Candidate Sourcing & Scoring Platform* | [GitHub](#) | [Live](#)

- Architected an AI sourcing platform that eliminates manual recruiting overhead by parsing unstructured job descriptions and ranking candidates via a 60/40 skill-experience scoring model.
- Engineered microservices using **Java 21 (Spring Boot 3)** for core REST APIs and RBAC, alongside **Python (FastAPI)** with a pluggable LLM provider abstraction. Used **MongoDB** for data storage.
- Built a responsive SPA using **React 18, TypeScript, Vite, Zustand, and TanStack Query**, optimizing client state management, caching, and real-time CSV exports.
- Orchestrated containerized deployment pipelines using **Docker**, Docker Compose, Render, and Vercel for local multi-container workflows and low-latency production hosting.

Education

Bachelor of Engineering, AI-ML | 2024 | B.M.S. College of Engineering, Bengaluru | 8.5 GPA
