Professional Summary

Backend Engineer with **2 years of experience** building and maintaining scalable and resilient enterprise systems using **Java**, **Spring Boot**, and **Angular** in the fin-tech domain. Experienced in **microservices**, **batch processing**, **REST API** design, and application security. Actively learning **Generative AI** and **Agentic AI** application development.

Work Experience

Wissen Technology Pvt Ltd, Bengaluru

June 2024 – Present

Associate Software Engineer

- Developed and maintained an enterprise workforce resource management platform for a leading global **fin-tech** company, building **RESTful APIs** with **Spring Boot** to power a resource-allocation dashboard within a **microservices** ecosystem within **Agile** SDLC environment.
- Improved system performance by decoupling dependent services using an asynchronous database-backed queue mechanism, replacing synchronous REST calls and reducing API execution time by **~60%**.
- Engineered **Spring Batch** integration, which automated the distribution of **800+ open positions** monthly to third-party hiring platforms with notifications and ingesting candidate data back, creating a closed-loop hiring pipeline.
- Designed and delivered a **project life cycle tracking** feature using **Spring Boot** and **Angular**, making the tool a single source of truth across organizational hierarchies, reducing manual tracking and duplication.
- Refined the **event-driven architecture** using **IBM MQ** and **Spring Application Events**, partnering with downstream teams to ensure seamless data flow for metric computation and reporting across teams.
- Re-amend the user-authority resolution API using **Spring Expression Language** to decouple permission logic from business workflows, enabling cleaner **RBAC** management across hiring and notification modules.
- Achieved a **70% reduction in API response time** (from ~1 min to 15–20 s) through **Spring Data JPA (Hibernate)** query optimization and **application-level caching**.
- Improved resiliency of real-time budget status streaming using **Spring Retry**, reducing failed re-stream incidents by **~84%** and ensuring failed records were automatically retried to downstream systems.
- Identified and fixed **broken access control** vulnerabilities (OWASP Top 10) by reorganizing the authority layer with **Spring Security**, custom **filter chains**, and **RBAC**.
- Led **application modernization**: migrated a **Java 8 / Ant / Spring MVC** monolith to **Java 17 / Gradle / Spring Boot 2.7** microservices; containerized services with **Docker** and improved dependency freshness from **2% to 25%**.
- Drove **JDBC to JPA/Hibernate** migration using a branch-by-abstraction pattern with characterization testing, ensuring zero regression and full functional parity.
- Led efforts in migrating from **Sybase ASE** to **IBM DB2**, resulting in **reduced deadlocks**, improved concurrency handling, and adoption of advanced SQL capabilities such as **Common Table Expressions (CTEs)**.
- Collaborated with DevOps to containerize services using **Docker** and establish module-level **CI/CD** pipelines, transitioning to a **Distributed Architecture** and reducing build and deployment time by enabling only changed modules to be deployed.
- Increased unit test coverage from **5% to 20%** within the first year using **JUnit 5**, **Mockito**, **MockMvc**, and **H2**; used **Grafana** and **Loki** for observability and production incident resolution.
- Resolved high-priority **production incidents** with direct financial impact by coordinating with support teams and end users for rapid root-cause analysis, saving the firm significant manual intervention costs.

Skills

Java | Spring Boot | Spring Batch | Microservices | Spring Data JPA | Hibernate | SQL | MongoDB | Node.js | Express.js | TypeScript | Python | Fast API | Angular | React | Docker | Shell | Generative AI | Agentic AI | MCP | RAG | Git | GitHub

Projects

Talent-Lens-AI : *AI-powered candidate sourcing and scoring tool built at a hackathon* | [GitHub](#) | [Live](#)

- Takes a job description, searches **GitHub** and **Stack Overflow** for matching profiles using multi-step **LLM function-calling (OpenAI)**, and returns a ranked shortlist for recruiters via **prompt engineering** and an agent pipeline.
- Stack**: Java, Spring Boot, Docker, Python, Fast API, OpenAI SDK, React (Vite), MongoDB.

PharmaPlus : *Full-stack medicine commerce platform* | [GitHub](#)

- Customer storefront and admin console (inventory, bulk Excel import) with **RBAC**.
- Stack**: TypeScript, Express.js, PostgreSQL, React (Vite).

Certifications

- Full Stack Generative AI & Agentic AI, 2026, Udemy – [Udemy Certificate](#)
- Claude Code in Action, 2026, Anthropic – [Anthropic Skilljar](#)

Education

Bachelor of Engineering, AI-ML | 2024 | B.M.S. College of Engineering, Bengaluru | 8.5 GPA
